DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 and 10-13 are rejected under 35 U.S.C. 102(b) as being anticipated Tsukihashi (5,802,026).

Tsukihashi discloses the invention as claimed. Figs. 1 and 2 show the information reproducing apparatus having: means for reading information from the information medium that is rotated (Fig. 1); and the ability of determining a rotational velocity of the information medium on the basis of a data transfer rate during the read request operation (see Figs. 2 and columns 6-7), as set forth by the claims. Note also Fig. 2, and columns 6-7, shows the relationship between the position of the disk, transfer rate and rotational speeds, which can either be set during recording and reproduction, or determined based on the chart shown in Figs. 2. Also columns 7-8 describe adjusting the rotational speed or transfer rate based on the average transfer rate for the disk, as set forth in claims 2, 3, 4, 11, 12 and 13. See also the description of the figures and apparatus for further limitation as set forth the claims.

Allowable Subject Matter

Claims 5-9 and 14-35 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record alone or in combination does not teach or suggest the information reproduction method and apparatus as set forth in claims 1-4 and 10-13 having the further limitations as set forth in claims 5-9 and 14-35, and as disclosed in the specification.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Sun et al. (5,870,363) discloses a reproducing apparatus having the ability of setting the rotational velocity based on the transfer rate or location on the medium.
